                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to cytokine fusion proteins with increased therapeutic index and methods for increasing the therapeutic index of such fusion proteins. The fusion protein comprises a non-interleukin-2 such fusion proteins. The fusion protein comparition for treating cancer, viral infections or immune disorders. The fusion protein is also used in gene therapy. The present sequence is human immunoglobulin gamma (IgG) constant region. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                        Cytokine; interleukin-2; IL-2; cancer; viral infection; immune disorder; gene therapy; immunoglobulin; Ig; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New fusion protein comprising a non-IL-2 moiety fused to a mutant IL-2 moiety, useful for preparing a composition for treating cancer, viral infections or immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 ASTKGPSVPPLAPSSKSTSGGTAALGCLVKDYPPEPVTVSWNSGALTSGVHTPPAVLQSS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STYRVVSVLTVLHQNWMNGKEYKCKVSNKALPAPIEKTISKAKVQPREPQVYTLPPSRDE

Also described: (I) apharmaceutical composition comprising a pharmaceutical carrier and a therapeutic amount of (I); (2) methods of treating an osteopenic disorder on a patient, composition of (I) a manual of the pharmaceutical composition of (I) or a pharmaceutical amount of (I); and (3) a method for detecting OPGL in a biological sample, comprising contacting the sample with (I) under conditions that allow for binding of the antibody osteopathic, and measuring the level of bound antibody in the sample. (I) has osteopathic, antiarthritic and cytostatic activities, and can be used in gene therapy. The composition and methods are useful in diagnosing or treating bone disorders, such as osteoporosis, bone loss from arthritis, paget's disease or esteopenia. The antibody (I) may also be used for detecting OPGL in biological samples and in identifying cells or tissues

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New immunoadhesin, useful for treating anthrax and rhinovirus, comprises chimeric toxin receptor protein linked to immunoglobulin heavy chain, and J chain and secretory component associated with the chimeric toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel immunoadhesin comprising a chimeric toxin receptor protein consisting of a toxin receptor protein linked to at least a portion of an immunoaglobulin heavy chain with a J (joining) chain and secretory component (SC) associated with the chimeric toxin receptor protein. The immunoadhesin comprises a chimeric bacterial or viral toxin receptor protein and the immunoadhesin of the invention demonstrates virucide and antibacterial activities and may be useful for reducing the binding of a viral or bacterial artigen to a host cell and thus for treating or preventing anthrax, as well as human thinovirus infection which results in the common cold. The current sequence is that of the human incommon related protein of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 54,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gamma3 heavy-c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A; Molecule type: protein
A; Molecule type: protein
A; Mesidues: 1-289 «FRA»
A; Mostes: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain
A; Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain
A; Note: this protein lacks most of the V region and all of the CH1 region. Residue 12 con
A; Note: the sequence of residues 42-76 was taken from the reference that follows

Biochemistry 20:236-12370(1981).

I Biochemistry 20:236-12370(1981).

I MINCELLANBOUS: Nie has the GIM(17) allotypic marker, 97-K, and the GIM(1) marker and the GIM (non-1) markers.

I MINCELLANBOUS: Nie also differs in the amidation states of 35, 116, 198, 269 and 272.

I MINCELLANBOUS: EU also differs in the amidation states of residues:

I MINCELLANBOUS: EU also differs in the amidation states of residues 268-272.
